

## Applications

The idea of the Phlogistoncreme® was to apply the juices of the plants permanently to the skin. If the skin is wetted with the juices, they flow away quickly and they form only a thin layer. And in our case, it is so, much helps a lot. Besides, in the household you may have some Aloe Vera juice, but with the Mangosteen juice in this form, we are the only worldwide that can use it in cosmetics.

So, we need a paste-like substance, which lasts long with the juices on the skin. A good paste-like substance is our cream with a high proportion of 20% of the natural juices.

And what is it good for? The nature got substances good for a lot and for our skin the pharmaceutical industry don't even is able to dream about. They got Cortisole and that's it. Or they invent diseases for something they got in store but not good for something like for the ADHD they recommend strongly Ritalin! In my times ADHD was called a dreamer what i was myself, so lucky my mum didn't give me drugs.

Our combination of extracts from Aloe Vera, Mangosteen, Lavender oil, Vitamin E, Olive oil maintain the skin noticeably immediately, so that all irritation and redness also fade by the improved structure of the skin.

Skin diseases with irritation, redness, itchiness, pain are e.g. Acne, Rosacea, Seborrhoic Eczema, Warts, Hemorrhoids, fungus infections, Psoriasis, Neurodermatitis, Perioral Dermatitis, Allergy with itchiness get's you really nervous and more.

As I said before, our Phlogistoncreme® helps better the more you apply on the irritated areas. So, we apply it thick like a paste on the irritated skin areas and do not rub it either. If the skin curses about their condition with irritation, redness, pain, itching, dandruff, then apply thickly, leave at least 20 minutes afterwards you can wipe it off.
